FRANCO

Franco Finishes Wet Room

A complete board & render system

Franco 'Portofino' is a highly durable lime based plaster which can be used as an alternative to Tadelakt.

GENERAL

Franco 'Portofino' has been designed to be hand applied, which can be finished in a variety of ways and has a high knock resistance. The raw materials and pigments are factory blended to give consistency in batching. Sealers & water based treatments ensure excellent water shedding properties. This gives 'Portofino' its unique look and feel.

DESCRIPTION

Franco 'Portofino' is a 2 coat application material which is applied in fine coats. Typical finished thickness is 2mm including a Portofino key coat.

Appearance: Franco 'Portofino' has a smooth, polished, mottled finish. It has a similar look and feel to Tadelakt plaster, which has both depth and a sheen. It is available in a comprehensive range of colours to complement the design. Portofino can also be used as a polished plaster.

Fire Resistance: Franco 'Portofino' is non-combustible and meets the class 'O' fire rating when applied to Blucald substrates which complies to Euro AZ-BS-EN13501-1.

Storage: Franco 'Portofino' should be stored in dry conditions, off the ground and above 4 degrees celcius.

SITEWORK

Preparation, Mixing and Application: Franco Finishes Ltd supply and install. Boards may be fixed by your bathroom installer inline with our specification. The product is pre-mixed to the required colour 2/4 days before application. Individual specification required. An application service is offered.

Coverage: 15 sq.m per 32kg container including key coat and finishing coats.

Supply and Price: Price on application, costs vary based on colours.

THE WET ROOM SYSTEM

- 10mm Render carrier board
